Troitsky Toolbox — Member Needs & Service Priority Survey

Methodology record for the first survey, as actually administered, collecting general member needs and service priorities. Together with the stakeholder interviews it makes up the Fall CD (Interviews), and it is the source for SRS section **P.7 (Requirements process and report)**.

Instrument: Google Forms, titled *Troitsky Toolbox — Member Needs & Service Priority Survey*. 11 questions, anonymous.

---

1. Survey Info

- **Population:** McMaster Troitsky Club members — team/general members, team captains, coaches, and executive members. Alumni are not excluded.
- **Recruitment:** voluntary, through the club's own communication channels.
- **Sample type:** self-selecting convenience sample. Not random.
- **Anonymity:** no name, student number, MacID, or email is collected. Email collection is disabled in the form. Response limiting, which would require sign-in and therefore identify respondents, is disabled.

Some questions collect general club experience so results can be grouped, without identifying individual students.

2. The Survey

Introduction text (as presented)

> During the fall and winter terms, a software capstone group will be creating a website/service to support the McMaster Troitsky club. The development process is aiming to be heavily intertwined with the club for this coming year to create a service that is highly tailored to the needs and current limitations of the club.
>
> This anonymous survey serves to collect interest and priority of concerns within the club. Participation is voluntary, any question may be skipped.

Questions and traceability

Every question is tagged with the SRS section its data feeds.

#	Question	Type	Feeds
1	How many years of experience do you have in Troitsky? (0–5)	Single select	

#	Question	Type	Feeds
2	What is your current role(s)? (Team/General Member, Team Captain, Coach, Executive Member)	Multi select	
3	What is your modelling experience? (None / Through some courses / Experience modelling in and out of class)	Single select	
4	How valuable would you find an entry level modelling service, implementing some basic features and model feature analysis? (1–5)	Linear scale	
5	Value of easy access to past McMaster Troitsky data, per type: bridge modelling file; joint construction data; manufacturing information; past team results; past technical presentation material (1–5 each)	Grid	
6	How does your team store data? (Microsoft Teams, Google Drive, individual people hold files, Discord, email, other)	Single select	
7	What has been one of the most frustrating parts of your time in the club, outside of actually building the bridge?	Paragraph	
8	Rate features A–K on how useful you would find them (Would not use → Club needs this)	Grid	
9	If we could deliver only 3 of these, which would you choose? (A–K, up to 3)	Multi select	
10	Would you want your team files, results and progress to be available for future teams to learn from? (Yes / No / Maybe)	Single select	

#	Question	Type	Feeds
11	If you could go back to being a new member, or if you're currently a new member, what tutorials would you want access to? (Modelling software, manufacturing, slab building, team organization, other — select 2)	Multi select	

Feature list used in Q8 and Q9:

A. Searchable archive of past bridge designs B. Database of material testing results (stick strength, glue, floss, etc.) C. Bridge weight estimator from a submitted model D. Structural efficiency calculation E. Ultimate load and failure point prediction F. Upload and visualise a team's bridge model in the browser G. Exit documents / role handover records for executive positions H. Onboarding guide and training material for new members I. Private workspace for each team's own files and data J. Competition rules and regulations reference K. Club announcements and general information page

3. Data Collection

1. Export responses to CSV.
2. Review every free-text answer for identifying information and redact before committing, ensure written answers are usable.
3. Commit the confirmed CSV to `docs/CDs/Interviews/` as the raw data appendix.
